

When customers talk about meteodyn WT

“Ventus chose meteodyn WT because it gives us the ability to determine wind flow dynamics based on a better solution of the Navier-Stokes equation. We have used the software at proposed sites with multiple meteorological masts and can confirm that meteodyn WT produces accurate results.

We certainly appreciate the hard work that meteodyn staff invested in understanding our requirements and their dedication to their product is evident during the informative training sessions.”

Aaron Long – Manager of Energy Forecasting – Ventus Energy Inc

“Failure of convergence does not happen very often, so in most cases work is efficient and in-time when using meteodyn WT”

Christoph Bauer – Senior Project Manager – Lahmeyer International GmbH

“Meteodyn WT’s considerations of forest canopy, atmospheric stability, grid refinement are very good”

Hyun-Goo Kim – Senior Researcher of Wind Energy research Group - Korea Institute of Energy Research
